Mohamed Khater

Senior Laravel Backend Engineer

Cairo, Egypt | 01021277815 | mhmedkhaater@gmail.com | linkedin.com/in/mohamed-mahmmud

SUMMARY

Senior Laravel Backend Engineer with 6+ years of experience architecting and scaling ERP, Fintech, and high-traffic platforms using PHP and Laravel. Hands-on experience building Payment Processing Engines and Recurring Billing Architecture, including Stripe and PayTabs payment gateways, webhooks, and event-driven integrations, and subscription/recurring invoicing workflows. Specialized in RBAC systems, approval workflows, payroll/financial engines, and performance optimization for large-scale relational and graph databases (MySQL, PostgreSQL, Neo4j). Experienced in designing systems using Clean Architecture, SOLID principles, and the Repository Pattern, with Redis-backed caching and queue systems, Test-Driven Development (TDD) practices using PHPUnit/Pest, and RESTful API design for high-availability, multi-tenant applications, with a strong focus on systems integration, transactional consistency, and PCI-DSS compliance awareness.

WORK EXPERIENCE

Senior Backend Developer — Gap Cloud *Aug 2025 - Present*

- Led backend development of a scalable ERP platform serving multiple business domains.
- Designed and implemented scalable backend modules using Clean Architecture, SOLID principles, Repository Pattern, and Service Layer architecture to improve maintainability, testability, and scalability.
- Provided architectural guidance, participated in code reviews, and mentored developers to ensure engineering best practices and high code quality.
- Promoted a test-first mindset by writing and maintaining PHPUnit/Pest test suites for critical business workflows.
- Designed system architecture, optimized performance, and implemented complex workflows to support high-volume operations and multi-role access control.
- Implemented Redis-based caching and Redis-driven job queues (instead of database queues) to reduce load times and handle high-volume asynchronous operations.
- Managed CI/CD pipelines using Azure Pipelines for automated build, testing, staging, and production deployments.
- Wrote automated tests (PHPUnit/Pest) to ensure reliability of critical business logic across ERP modules.

Senior Backend Developer — Etolv *Nov 2024 - Aug 2025*

- Contributed to the development and maintenance of a large-scale tourism ERP system, managing complex business logic and high-traffic operations.
- Optimized system performance and database efficiency, ensuring reliability and responsiveness across millions of daily user interactions.
- Handled Neo4j graph database with over 25 million records, designing and executing advanced queries for relationship-driven data insights.

Backend Developer — STC Skills For Technology & Coring *Jul 2023 - Oct 2024*

- Resolved complex issues in e-learning systems, improving platform performance, reliability, and user experience.
- Built and maintained a custom ERP reporting system to automate report generation and support data-driven decisions.

- Enhanced system security and user access control through role-based permissions and secure authentication.
- Collaborated with cross-functional teams to deliver scalable solutions using Laravel, SQL, and third-party service integrations.

Backend Developer — BILLX, Saudi Arabia *Remote* *Jun 2022 - May 2023*

- Developed and managed CRM systems for multi-tenant environments and real estate platforms.
- Implemented real-time auction functionalities using WebSockets and various live data technologies.
- Coordinated project tasks, ensuring compliance with engineering standards and company protocols.
- Conducted thorough analyses of systems and projects to identify and rectify design discrepancies.
- Collaborated with cross-functional teams to provide scalable and efficient solutions.

Full Stack Developer — Flafina-Zakham, Saudi Arabia *Remote* *Jan 2020 - Jun 2022*

- Developed and maintained backend services and RESTful APIs using PHP and Laravel, alongside frontend interfaces for internal and customer-facing applications.
- Designed and optimized MySQL database schemas and queries to support growing application data and reporting needs.
- Implemented authentication, role-based access control, and secure API endpoints for multi-user application workflows.
- Built responsive frontend components with JavaScript, jQuery, and Bootstrap to integrate seamlessly with backend services.
- Collaborated with cross-functional teams to debug issues, improve performance, and deliver features on schedule.

EDUCATION

Bachelor of Science in Computer Science

Fayoum University, Faculty of Science, Computer Science Department | Sep 2015 - Jul 2019

Certification: Building Web Applications using PHP & MySQL

Information Technology Institute (ITI) | Jun 2022 - Oct 2022

PROJECTS

ERP System (HR, Finance, Payroll, Approval & Procurement Modules)

- Architected and developed a modular, multi-tenant ERP system supporting multiple companies with isolated data, configurable workflows, and role-based access.
- `Applied Clean Architecture, Repository Pattern, and Service Layer principles to separate business logic, improve maintainability, and support long-term scalability.`
- Designed normalized and optimized database schemas for handling large-scale HR and financial data with high performance.
- Built a full-featured HR management system including regularizations, vacation carryover, deductions, overtime, personal excuses, events, and internal ticketing.
- Developed a flexible attendance engine supporting location-based check-in/check-out tracking, real-time attendance preview, custom employee schedules and shifts, and dynamic weekly attendance configurations.
- Implemented policy-driven HR rules configurable per company and per employee role.
- Designed and implemented RBAC (Role-Based Access Control) system with dynamic permissions, enabling fine-grained control over modules and actions, supporting multi-level roles and custom permission assignment per employee.

- Engineered a complete payroll system including employee contracts and salary structures, automated payslip generation, integration with attendance/overtime/deductions, and payroll processing workflows with validations and adjustments.
- Built a reusable approval engine supporting sequential and non-sequential approval flows, multi-level approvals across modules (HR, Finance, Procurement), dynamic assignment of approvers, and real-time tracking of pending and processed requests.
- Developed financial management features including income and expense tracking, asset management lifecycle, check issuance and tracking, and financial records integration with other modules (payroll, procurement).
- Implemented procurement workflows including purchase requests creation and management, multi-step approval cycles, procurement tracking and status management, and integration with finance for expense control.
- Optimized complex queries and improved database performance for large datasets, implementing caching strategies and query optimization techniques to reduce load times.
- Utilized queues and background jobs for handling heavy and asynchronous operations (e.g., payroll processing, notifications), ensuring data integrity and transactional consistency across critical operations.
- Designed and developed RESTful APIs for system integration and frontend consumption, structured with proper validation, authentication, and error handling.
- Built company self-registration with tax-based discount logic for companies holding a valid tax registration number, including external integration with Egypt's ETA (e-invoicing/tax authority) system.
- Resolved upgrade and compatibility issues while migrating the platform from Filament v3 to v4 and from Laravel 11 to Laravel 12, ensuring uninterrupted functionality across all ERP modules.
- Integrated Stripe (Charges, PaymentIntents, Webhooks, Subscriptions) and PayTabs payment gateways into the ERP's billing module, enabling online invoice settlement and multi-provider payment acceptance.
- Built webhook handlers to process asynchronous payment gateway events (charge succeeded/failed, subscription renewed/cancelled) with idempotent processing to guarantee transactional consistency.
- Automated recurring billing and dynamic invoicing schedules for subscription-based company plans, integrating payment status with the ERP's financial and ETA e-invoicing records for compliance and auditability.

HR Recruitment & Applicant Tracking System (ATS) Module *(sub-module within the ERP System project above)*

- Built a complete HR recruitment module covering job postings, candidate assessments, and multiple interview types (in-person with required location pinning on a map, and video interviews).
- Integrated external video conferencing providers (Zoom, Google Meet, Microsoft Teams) for scheduling and hosting remote interviews.
- Engineered a built-in ATS (Applicant Tracking System) service that parses uploaded CVs (PDF, DOC, DOCX), auto-extracts candidate name, email, and phone number, and auto-fills application data.
- Built an automatic experience-calculation engine that parses candidate work history and job-required experience keywords to compute total years of relevant candidate experience.
- Designed a configurable interview workflow engine allowing HR managers to define when candidates are notified per interview stage: immediately, at a custom scheduled date/time (via **Redis-backed delayed queue jobs**), automatically after a parent interview is marked "passed," or automatically after an application status change (e.g., final/CEO interview after acceptance).
- Automated email notifications for every recruitment stage (interview assignment, assessment assignment, acceptance, rejection), including interview details, links, or locations as applicable.
- Implemented automatic scoring and result calculation for candidate assessments and overall candidate evaluation scores.

- Built automated employee onboarding and offboarding workflows, triggered automatically on employee creation or manually by HR.
- Developed a multi-vendor, multi-tenant offer letter generation system.
- Used **Redis as the queue driver** (rather than the database) across the recruitment and interview-scheduling engine for speed and reduced database load.

TrioAPI – Tourism ERP System

- Contributed to the development of a large-scale tourism ERP system, powering complex booking workflows and high-volume operations.
- Upgraded the framework from Lumen to Laravel 9, then from Laravel 9 to Laravel 11, resolving compatibility issues with dependencies, packages, and custom modules across major version jumps.
- Led efforts in performance tuning and proactive maintenance, ensuring system stability and scalability under heavy traffic.
- Designed and optimized Neo4j graph database queries for over 25 million records, improving relationship-driven data retrieval.
- Collaborated cross-functionally to deploy secure, maintainable, and extensible modules supporting business-critical processes.

STC Inspection System

- Developed a comprehensive management system for STC Inspectors, enabling efficient organization of inspection reports, job tickets, rigs, and client data.
- Implemented a role-based access control system with Laravel Policies and Gates to ensure secure data access for inspectors, admins, and clients.
- Designed and developed a dynamic reporting system to generate custom reports with filters (e.g., inspector name, rig type, date range), with export options to CSV/Excel/PDF using Laravel Excel.
- Integrated real-time notifications with Laravel Echo and Pusher, alerting users of updates to reports, job tickets, and inspection statuses.
- Implemented a multi-stage workflow for inspection reports, allowing users to track report statuses (draft, reviewed, approved).
- Developed a client dashboard for real-time access to inspection data, allowing clients to view reports specific to their tools.
- Created an audit trail to track all changes to reports and job tickets, enhancing data accountability and transparency.
- Optimized database queries and used Eloquent relationships and indexing to improve system performance with large volumes of inspection data.
- Integrated with external inspection tools for automated data import, streamlining workflow and reducing manual input.

STC Exam System (Nile Future)

- Developed the STC Exam System, an online platform to manage training certificates for the oil and gas sector, ensuring efficient tracking of user activities and training progress.
- Implemented a user management system, allowing bulk import of users via Excel sheets or by creating multiple users simultaneously.
- Designed and integrated customizable online exams, enabling the creation of dynamic question sets tailored to candidates' specific needs.
- Developed a feature to generate training certificates, including detailed descriptions and QR codes for each certificate to ensure authenticity and easy access.
- Enabled bulk certificate extraction and automated reports on training activities, improving administrative efficiency.

- Utilized QR code generation for certificates, allowing easy scanning and verification of authenticity for each issued certificate.
- Optimized data handling to manage large user bases and certification data, ensuring smooth performance even with high traffic.

E-SHEF

- Developed an e-commerce platform for food, herbs, seeds, and spices in Egypt and the Arab world.
- Curated a selection of premium-quality products focused on wellness and flavor.
- Enabled a community-driven experience, promoting engagement among food enthusiasts.
- Integrated Stripe and PayTabs checkout flows for order payments, handling webhook-based payment confirmation and failure notifications to keep order status and inventory in sync.

SITEWORK

- Provided comprehensive landscaping solutions, specializing in design and installation of irrigation networks and central control systems.
- Supplied and planted ornamental greenery for commercial and residential projects.
- Designed and constructed sports fields, including football and polo fields.
- Built and maintained fountains and swimming pools, ensuring high-quality and efficient long-term performance.

SHELLY

- Developed solutions for smart home automation, offering devices that integrate with existing home networks for improved convenience and energy management.
- Focused on IoT technology to create Wi-Fi and Bluetooth-enabled smart devices for controlling lighting, security, and home appliances.
- Contributed to the growth of a global smart home ecosystem, promoting user-friendly setups and intuitive interfaces.

FALAFINA

- Developed a restaurant management system for Falafina, streamlining operations including order management, inventory tracking, and staff scheduling.
- Implemented features for menu management, enabling easy updates and customization of food offerings.
- Integrated a customer ordering system, allowing seamless order placement and tracking in both online and in-house scenarios.
- Optimized inventory management for real-time stock tracking and automated reordering.

MAHARAT

- Contributed to the development of Maharat, an online platform aimed at providing professional development and skills training.
- Implemented features to support course management, user registration, and tracking of learning progress.
- Focused on creating a seamless user experience for individuals seeking to enhance their skills across various fields.

BAWARQ

- Developed Bawarq.org, a platform focused on oil and gas tools and inspection services.
- Enabled users to schedule inspections, track tool conditions, and manage service history for various equipment.
- Implemented tool management features, including tracking maintenance schedules, certifications, and inspection reports.

- Enhanced the user interface to streamline the inspection reporting process, improving overall efficiency for oil and gas industry professionals.

ORCHIDIAPHARMA

- Designed and implemented features for product catalog management, enabling easy browsing and search functionality for pharmaceutical products.
- Integrated contact forms and customer support features, improving user engagement and communication with potential clients.

Inventory ERP System

- Designed and implemented inventory tracking and stock management features, enabling real-time updates and accurate control over product quantities.
- Developed automated accounting modules to streamline financial processes and reduce manual errors.
- Integrated role-based access controls and security features to safeguard sensitive financial and operational data.
- Facilitated better decision-making through dynamic financial reports and instant inventory insights.
- Enhanced operational efficiency by unifying inventory, accounting, and reporting into a single ERP platform.
- Automated recurring payment schedules and dynamic invoicing for supplier and customer accounts via Stripe subscriptions, reconciling payment webhooks with the accounting module for transactional consistency.

MLS Real Estate & Auction Platform

- Developed a Multiple Listing Service (MLS) system enabling real estate agents and buyers to list, search, and manage property listings efficiently.
- Integrated auction functionality tailored for real estate, supporting live bidding and real-time updates using WebSockets.
- Designed advanced property filtering, location-based search, and comparison tools to improve user experience.
- Implemented real-time notifications and updates for property status, auctions, and user activities.
- Ensured multi-tenant architecture for scalability across government and private-sector stakeholders.
- Enhanced transparency and accessibility in property transactions through secure and user-friendly interfaces.

SWYYP Platform

- Built a multi-role platform with dedicated dashboards for admins and vendors to manage users, events, and rewards.
- Developed a mobile application for football players to track performance, participate in events, and redeem prizes.
- Implemented dynamic and scrollable prize catalogs, allowing users to view, filter, and claim rewards in real time.
- Enabled secure authentication and role-based access across web and mobile interfaces.
- Integrated push notifications and in-app updates to keep users informed of new events and prize availability.
- Designed intuitive UI/UX for both admin and player interfaces to boost engagement and ease of use.

SKILLS

Backend & Frameworks: PHP, Laravel, Livewire, Inertia.js, Filament, Alpine.js, OOP, SOLID, Clean Architecture, Repository Pattern, Service Layer Pattern, REST API Design

Fintech & Payments: Stripe API (Charges, PaymentIntents, Webhooks, Subscriptions), PayTabs Integration, Payment Gateways, Recurring Payments, Dynamic Invoicing, ETA E-Invoicing, PCI-DSS Compliance Awareness, Transactional Consistency

Databases: MySQL, PostgreSQL, Neo4j, NoSQL, Query Optimization, Indexing

Caching & Queues: Redis, Laravel Queues, Delayed/Scheduled Jobs, Background Jobs

Testing: PHPUnit, Pest, Test-Driven Development (TDD), Automated Testing

DevOps & Cloud: Linux **,** Docker, Azure Pipelines (CI/CD), AWS, Azure, cPanel, WHM Root, Pipeline Handling

Frontend / Other: JavaScript, jQuery, Ajax, Bootstrap, Tailwind CSS, CSS, JSON

Practices: `Clean Code, Code Reviews, Agile Development, Software Development Lifecycle (SDLC), Debugging, Engineering Best Practices`

PROFESSIONAL SKILLS

- **Technical Leadership**
- **Software Architecture Design**
- **Problem Solving & Analytical Thinking**
- **Clean Architecture & SOLID Principles**
- **Code Reviews & Engineering Best Practices**
- **Mentoring & Knowledge Sharing**
- **Cross-Functional Collaboration**
- **Ownership & Accountability**
- **Communication & Stakeholder Management**
- **Performance Optimization**
- **Continuous Learning & Self-Development**
- **Time Management & Prioritization**
